

IMU6410 Top Copper Layer

Timer 1 outputs OC1A (PD5) and OC1B (PD4) drive the two LEDs and no modification to the PCB is required. Just attach wires at the locations indicated.

Timer 2 outputs OC2A (PD7) and OC2B (PD6) are inputs driven by ADXL345 INT2 and L3G4200 INT2 outputs. Attach wires at the locations indicate and make small cuts to circuit traces at the two locations indicated.
